

CLAIMS

- 1 1. A method for verifying a configuration of a storage environment having at least
2 one storage system operatively interconnect with at least one client, the method com-
3 prising the steps of:
4 initiating a configuration verification program on at least one client to determine:
5 (i) versions of components of the storage environment;
6 (ii) configuration settings of components of the storage environment; and
7 (iii) if one or more components of the storage environment have failed; and
8 presenting a report to a user identifying a set of warnings and errors with the con-
9 figuration of the storage environment.
- 1 2. The method of claim 1 wherein the step of initiating the configuration verification
2 program comprises the step of entering a command line interface command.
- 1 3. The method of claim 1 wherein components of the storage environment further
2 comprise one or more storage systems.
- 1 4. The method of claim 1 wherein components of the storage environment further
2 comprise one or more clients.
- 1 5. The method of claim 1 wherein components of the storage environment further
2 comprise one or more network switches.
6. The method of claim 1 wherein components of the storage environment further
comprise one or more interconnecting cables joining other components.
- 1 7. The method of claim 1 further comprising the step of remotely accessing each of
2 the storage systems by the configuration verification program to determine the version of
3 a storage operating system executing on the storage system.

1 8. The method of claim 7 wherein the step of remotely accessing each of the storage
2 systems comprises the step of sending a remote application program interface command
3 to the storage system.

1 9. The method of claim 1 wherein the report further comprises a return code.

1 10. The method of claim 1 wherein the report further comprises a graphical represen-
2 tation of the configuration of the storage environment.

11. The method of claim 10 wherein the graphical representation further comprises
representations of a version and current configuration of each component of the storage
environment.

1 12. The method of claim 1 wherein an administrator initiates the configuration verifi-
2 cation program.

1 13. The method of claim 1 further comprising the step of automatically correcting any
2 of the set of warnings and errors detected.

1
2 14. The method of claim 1 further comprising the step of passing the set of warnings
3 and errors to an expert system.

4
5
1 15. A system for verifying a configuration of a storage environment having at least
2 one storage system and a client, the system comprising:
3 a configuration verification program executing on the client and adapted to de-
4 termine versions of components of the storage environment, configuration settings of
5 components of the storage environment and if one or more components of the storage en-
6 vironment have failed.

1 16. The system of claim 15 wherein the configuration verification program is further
2 adapted to present a report to a user identifying a set of warnings and errors with the con-
3 figuration of the storage environment.

1 17. The system of claim 16 wherein the report comprises a graphical representation of
2 the current configuration of the storage environment.

1 18. A system for verifying a configuration of a storage environment having at least
2 one storage system and a client, the system comprising:
3 a configuration verification program executing on the client and including means
4 for determining versions of components of the storage environment;
5 means for determining configuration settings of components of the storage envi-
6 ronment;
7 means for determining if one or more components of the storage environment
8 have failed; and
9 means for presenting a report to a user identifying a set of warnings and errors.
10 with the configuration of the storage environment.

1 19. The system of claim 18 wherein the report comprises a graphical representation of
2 the current configuration of the storage environment.

1 20. The system of claim 18 wherein the means for determining configuration settings
2 of components comprises means for remotely logging into each of the components of the
3 storage environments.

1 21. A computer readable medium, including program instructions executing on a
2 computer, for verifying a configuration of a storage environment, the computer readable
3 medium including instructions for:
4 determining versions of components of the storage environment;

5 determining configuration settings of components of the storage environment;
6 determining if one or more components of the storage environment have failed;
7 and
8 presenting a report to a user identifying a set of warnings and errors with the con-
9 figuration of the storage environment.

1 22. The computer readable medium of claim 21 wherein the step of determining ver-
2 sions of the components of the storage environment further comprises the step of re-
3 motely accessing each of the storage systems by the configuration verification program to
4 determine the version of a storage operating system executing on the storage system.

1 23. The computer readable medium of claim 21 wherein the step of remotely access-
2 ing each of the storage systems comprises the step of sending a remote application pro-
3 gram interface command to the storage system.
